Agricultural Extension Service

Billy G. Hicks, Dean

Introduction

The mere mention of feasibility studies suggests a multitude of different concepts, definitions and ideas. Feasibility can be defined as the process of determining or assessing the capability and likelihood of something being accomplished, brought about, used or dealt with successfully. In the *Agricultural Development Center* (ADC), feasibility studies may involve any portion or segment of a lengthy process that includes preliminary studies into the technical possibilities of a project, financial analysis, technical evaluation and market potential and development. Some individuals adhere to a very narrow definition of feasibility that concentrates only on financial capability. That is, a project is feasible only if it is projected to cash flow or generate a profit. Others take a broader approach and include production, regulatory and marketing concerns in determining a project's feasibility.

Evaluating the feasibility of a new project involves assessment of many different items. However, a primary component of such a study should focus on the evaluation of *economic* feasibility. Important technical and physical relationships must be considered as well. Questions of social and political feasibility should also be addressed. For instance, a poultry waste processing center may be economically and physically feasible, but zoning regulations or public opposition may make it infeasible overall. All factors, economic and non-economic, of feasibility should be addressed and evaluated in a feasibility study.

Future costs and returns from investments cannot be forecast with certainty. Changing technologies and consumer demand may cause a feasible project today to be infeasible in the future. Similarly, a project that is feasible in one location may not be feasible in another.

The financial situation in rural Tennessee has forced many farm families to make major financial and business adjustments. A survey of 1,000 Tennessee farm families participating in an intensive farm and financial management educational program from 1984 - 1989 indicated that 4 percent of them left the farm and 10 percent took off-farm employment. Today, farm families are investigating home-based industries and other small business ventures. To deal with the many changes affecting agriculture in Tennessee, farmers and agribusinesses must evaluate alternative types of enterprises and production, processing, marketing and distribution alternatives. Such evaluations must include production, marketing and financial considerations. A feasibility study is the process by which a project can be properly evaluated.

Basic Understanding of Feasibility

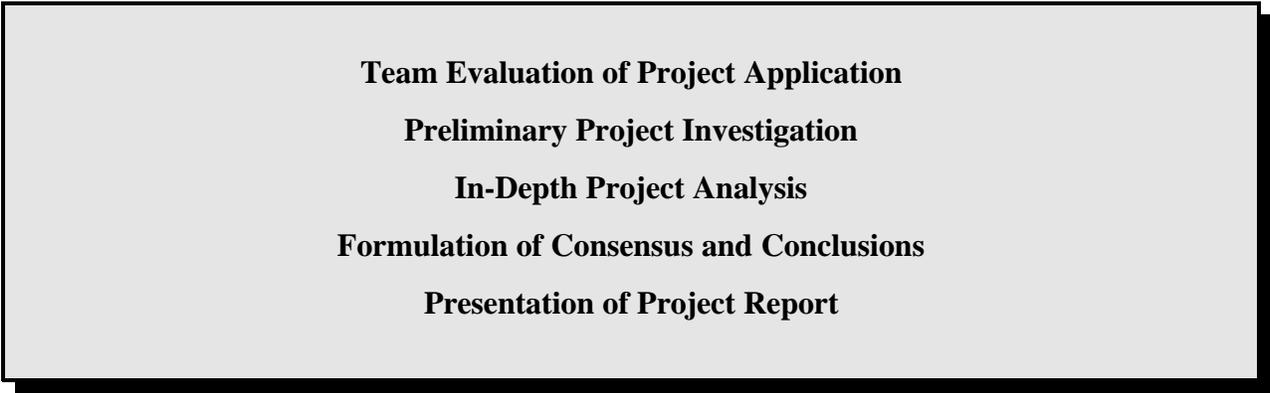

A feasibility study basically involves the assembly, analyzing and evaluating of information in order to address the question: "Should I do it?" The saying "*How it looks depends on where you stand*" can be applied to the concept of understanding feasibility. If two people enter into a contract that provides for the first to pay the second to perform a service, there are many ways for each to determine the feasibility of the agreement. Whether the venture is indeed feasible depends on how each party chooses to evaluate it. The person who is to pay money for the service must decide whether the agreement is *financially* feasible, that is, whether he or she can afford the service. Besides this, he or she must consider whether it is *economically* feasible, that is, whether the service provides benefits equal to or greater than the price. The contractor who will render

the service is concerned primarily with *physical* feasibility (whether the job can be done and whether available resources are adequate for it). Naturally, the contractor must also consider *economic* feasibility, in terms of whether the funds received are equal to or greater than the costs of providing the service.

Either party to such a proposed contract can consider the proposal from a variety of viewpoints, but some factors will inevitably dominate. If the price requested is so high that the prospective purchaser does not have sufficient funds, he or she will not be able to enter the contract and the proposal will fail because it is not *financially feasible*. If the service requested cannot be provided because the necessary techniques or equipment are not available, then the proposal will fail because it is not *physically feasible*¹.

A Broad Process for ADC Studies

Each feasibility study (and concluding report) will have a unique approach or structure. A process for projects evaluated by the ADC is outlined below.

A feasibility analysis by the *Agricultural Development Center* should not be so one-sided that the applicant (farmer, entrepreneur or business person) has no input or responsibilities. Input from the applicant, is very valuable to a feasibility study. As the ultimate decision maker, the applicant should interact with the ADC and keep them informed. It is best for the applicant to have some understanding of what a new, value-added venture will require before the investigation gets too in-depth. Therefore, a series of worksheets have been prepared to provide a framework for the study and to involve the applicant in the overall project assessment and data collection.

These worksheets have been developed and are presented to assist in the evaluation of the overall feasibility of projects evaluated by the ADC. They are not intended to be used as “stand alone” feasibility analysis tools. They should be used in workshop settings or in close working relations with the ADC. While the worksheets can be helpful “stand alone” tools, they do not provide the depth of explanation and direction needed to be fully beneficial.

Assessing Feasibility

Preliminary Worksheet #1

“QUESTIONS TO CONSIDER”

Addressing, Evaluating and Planning a New Product, Enterprise or Business

Rate the questions on a scale of 1 to 10. The rating should indicate the general feeling you have concerning the respective question. This worksheet is not intended to provide a definite YES or NO answer but merely an indication of how familiar and prepared you are for the project. The rating should help indicate potential weak and strong areas of the project.

----- General Rating -----
1 5 10
Weak Unknown Strong

Raw Product Supply

- What minimum size facility is required?
What is the required quantity of inputs?
Are the required inputs available? What about quality, timing and price?
How far away are the inputs?
Do alternative inputs exist?
How dependable are the input suppliers?
What alternatives exist for input suppliers?
Do long-term agreements exist?

Production Process

- What social concerns exist?
What are the start-up costs?
How much money must be borrowed?
What is the interest rate?
How many employees are needed?
What special skills are needed?
What is the local employment situation?
What type of training programs will be necessary?
What labor management experience is available?
What are the expected wage rates?

- What are the expected management costs? _____
- What are the expected fixed costs? _____
- What are the expected interest expenses? _____
- What depreciation is expected? _____
- What insurance costs are expected? _____
- What about taxes? _____
- What is the projected net income? (from the income statement) _____
- What is the expected annual cash surplus? (from the cash flow) _____
- What message do the break-even charts send? _____

Market Determination

- What are the consumption trends for the product? _____
- What are the quality & quantity restrictions/trends related to consumption? _____
- What population segments are the primary and secondary consumers? _____
- Is there an established marketing center? What are its characteristics? _____
- Is there a target market? What are its characteristics? _____
- What market alternatives exist? _____
- How are these markets now being served? _____
- How will the competition react? _____
- What type of distribution system is needed? _____
- What are the delivery requirements/considerations/schedules? _____
- What type of transportation is necessary? _____
- How will the product be introduced into the market? _____
- What is the stimulus to get the buyer's attention? _____
- How long will it take to get the product to desired sales volumes? _____
- What types of buyers will be targeted? _____
- What volumes will each buyer obtain? _____
- Where are the buyers located? _____
- What product qualities/specifications are required? _____
- What signals have potential buyers been sending? _____
- How reliable are the buyers? How stable are they? _____
- What types of payment schedules are likely? _____
- Are any special selling services required? How stable are they? What do they cost? _____
- What types of seasonal price patterns exist? _____
- What are historical prices for the product? _____
- What is the break-even price? _____
- What price will the market support? _____

Personal Characteristics

- Are you patient? _____
- Are you in good health? _____
- Are you willing to keep learning? _____
- Does your family totally support this venture? _____
- Do you take responsibility well? _____
- Do you have selling/marketing skills? _____
- Do you make decisions well? _____
- Are you resourceful? _____
- Are you a thinker? _____
- Do you understand the difference in efficient & effective? _____
- Can you “roll with the punches?” _____
- Are you courteous and understanding? _____
- Do you have good organization skills and abilities? _____
- Are you a self-starter? _____
- Do you desire to achieve results? _____
- Do you seek new opportunities? _____
- Do you have a high degree of energy? _____
- Do you have an ability to motivate people and get along with others? _____
- Do you have experience in many aspects of business? _____
- Do you have a proven ability to execute ideas? _____
- Do you have the ability to adjust your managerial style to suit a situation? _____
- Are you honest? _____
- Do you have foresight and planning abilities? _____
- Do you have a strong work-ethic? _____
- Are you an effective communicator? _____
- Do you have sound decision-making abilities? _____

How Much Money Have You Saved To Invest In The Business? \$ _____

How will you spend the dividends from this investment? \$ _____

How do you feel about never seeing this money again? \$ _____

AFTER ADDRESSING THESE QUESTIONS, ON A SCALE OF 1 - 10, HOW DO YOU FEEL ABOUT THE OVERALL POTENTIAL OF YOUR PROPOSED VENTURE:
_____ (1 = NOT VERY GOOD, 10 = GREAT!)

Assessing Feasibility

Preliminary Worksheet #2

IDENTIFICATION OF GOALS

“If you don’t know where you’re going, how will you know when you get there?” This is the essence of goal setting and it has a direct relation to evaluating a new business venture. Starting and operating a successful business is often only a means to a much larger end. Therefore, knowing the ultimate ambition is critical to properly assessing the merit of a new business.

Knowing what you want is the very first step towards getting it. Identifying your goals focuses your attention and provides a basis by which decisions can be made. Setting and achieving goals keeps a business going the right direction. Without goals, the truest measure of a projects feasibility cannot be evaluated.

Goals should be developed, but not just once. Goals, personal and business, change over time. Therefore, goals should be developed early in the life of a business and then evaluated and adjusted to address the changing times and changing desires.

There is a set of criteria that business goals should meet in order to be effective for the business. Business goals should be “S.M.A.R.T.” That is, each business goal should be Specific, Measurable, Attainable, Rewarding and Timed. Below is a worksheet to help in the identification and development of the goals that relate to your business. Make sure that each of your goals is “S.M.A.R.T.”

1) What are your ultimate life-time goals?

2) What are your goals for the next three to five years?

A State Partner in the Cooperative Extension System

The Agricultural Extension Service offers its programs to all eligible persons regardless of race, color, age, national origin, sex or disability and is an Equal Opportunity Employer.

COOPERATIVE EXTENSION WORK IN AGRICULTURE AND HOME ECONOMICS

The University of Tennessee Institute of Agriculture, U.S. Department of Agriculture,
and county governments cooperating in furtherance of Acts of May 8 and June 30, 1914.

Agricultural Extension Service

Billy G. Hicks, Dean

3) What are your goals for the coming year?

4) What "MUST" happen in order for these goals to be accomplished?

5) Explain how your proposed venture relates to your overall goals.

AFTER ADDRESSING THE ISSUES CONCERNING GOALS, ON A SCALE OF 1 - 10, HOW DO YOU
FEEL ABOUT THE OVERALL POTENTIAL OF YOUR PROPOSED VENTURE:
_____ (1 = NOT VERY GOOD, 10 = GREAT!)

General Personal Considerations

Business Ownership/Management

	YES	NO
1) Do you enjoy competition?	_____	_____
2) Do you take advice from others well?	_____	_____
3) Do you relate well with others?	_____	_____
4) Do you plan ahead?	_____	_____
5) Do you have will-power?	_____	_____
6) Do you like to make final decisions?	_____	_____
7) Do you adapt well to change?	_____	_____
8) Do you get things completed on time?	_____	_____
9) Do you have experience in this type of business?	_____	_____
10) Do you have good leadership abilities?	_____	_____
11) Are you patient?	_____	_____

Physical, Emotional & Financial

1) Are you prepared for this venture to be a 24 hour per day operation?	_____	_____
2) Do you have the physical needs to succeed in this business?	_____	_____
3) Are you and your family prepared for the emotional stresses of this business?	_____	_____
4) Do you realize that your personal savings could be lost?	_____	_____
5) Are you willing to lower your standard of living while the business grows?	_____	_____
6) Can you survive until the business generates a profit?	_____	_____

Personal Considerations

- 1) Do you know which skills and areas of expertise are critical to the success of the project? _____
- 2) Do you have these traits? _____
- 3) Does the project utilize your skills and traits? _____
- 4) Does the project directly relate to your goals and objectives? _____
- 5) Can the labor force be found to fulfill this project? _____
- 6) Are you considering this idea for the “right” reasons? _____

AFTER ADDRESSING THE GENERAL PERSONAL ISSUES,
ON A SCALE OF 1 - 10, HOW DO YOU FEEL ABOUT
THE OVERALL POTENTIAL OF YOUR PROPOSED VENTURE:
_____ (1 = NOT VERY GOOD, 10 = GREAT!)

Critical Success Factors

	YES	NO
1) Are there factors that would restrict or eliminate any of the required inputs?	___	___
2) Are the start-up requirements excessive?	___	___
3) Is adequate financing difficult to obtain?	___	___
4) Are there significant contingent liabilities?	___	___
5) Are there factors that constrain adequate marketing?	___	___

Desired Income

1) Do you know how much income you desire from this project?	___	___
2) Do you know what “minimum” income you require?	___	___
3) Do you know how much of your own savings will be required?	___	___
4) Do you know how much could be earned by investing your savings elsewhere?	___	___
5) Do you know how much you could earn working somewhere else?	___	___
6) Other than money, will you obtain value from this project?	___	___
7) Other than money, do you know what this project will cost you?	___	___

Other Considerations

Do you know how much money will be needed to get the business started?	___	___
Do you know where to obtain the needed start-up funds?	___	___
Will the product/service meet a need that is currently not met?	___	___
Will the product/service serve a market that is not currently satisfied?	___	___
How can the product/service compete with existing competition?	___	___
Do you know how much credit you can get from the business that will supply inputs?	___	___
Do you have a “management/advisory team” that can assist the business?	___	___
Are most businesses in the area doing well?	___	___
Do you know the kind of people (profile) that will purchase the product?	___	___
Do you know how many sales (dollars & units) to expect?	___	___
Do you have or have you identified a suitable facility?	___	___
Is there room for growth at the facility?	___	___
Is the facility suitable for sales?	___	___
Do you have a lawyer to advice the business?	___	___
Do you have an accountant to advice the business?	___	___
Have you listed the needed equipment & supplies?	___	___
Have you obtained cost estimates for them?	___	___
Do you have sources for used equipment & supplies?	___	___

- Have you identified your product line? _____
- Have you estimated the volume and timing of sales for the product line? _____
- Have you developed a list of suppliers? _____
- Have you compared prices, credit terms, transportation charges and reliability
of different suppliers? _____
- Have you compared your product/service to the competition? _____
- Have you identified a record-keeping system for financial records? _____
- Do you have experience tracking inventory? _____
- Are you familiar with how to maintain and report payroll and tax records? _____
- Are you prepared to offer credit sales? _____
- Are you prepared to never be paid for items sold on credit? _____
- Do you know what licence and permits are required for this business? _____
- Do you know what business laws apply? _____
- Do you know what type of business/product insurance is available? _____
- Do you know what type of business/product insurance you need? _____
- Do you know what business/product insurance will cost? _____
- Do you know how your product should be promoted? _____
- Have you identified promotion/advertising resources? _____
- Do you know how much you will be spending on advertising? _____
- Do you know how to price your products? _____
- Do you know how many sales will be possible at these prices? _____
- Have you considered discounts? _____
- Do you know where to find new employees? _____
- Do you know what characteristics you will desire in employees? _____
- Do you know how much you will spend on labor? _____
- Will you offer benefits? _____
- Do you have a training program? _____
- Do you have a plan for evaluating performance? _____
- Does your family support this venture? _____
- How will you stay abreast of the changes and opportunities that effect your business? _____

AFTER ADDRESSING THE GENERAL PROJECT ISSUES, ON A SCALE OF 1 - 10, HOW DO YOU FEEL ABOUT THE OVERALL POTENTIAL OF YOUR PROPOSED VENTURE:

_____ (1 = NOT VERY GOOD, 10 = GREAT!)

Complete this list of expenses based on an average month. Add or subtract items to fit your own lifestyle and financial obligations.

ITEM	COST
Rent or Mortgage	\$
Car payment & other loan payments	\$
Life & health insurance premiums	\$
Utility & telephone bills	\$
Home repairs and maintenance	\$
Food (groceries, away from home (eating out)	\$
Car repairs, gas, and parking	\$
Travel	\$
Medical and dental care	\$
Educational expenses	\$
Clothing	\$
Newspapers and magazines	\$
Child care	\$
Savings	\$
Spending money and allowances	\$
Entertainment	\$
Other Expenses	\$
Total Personal Expenses	\$

AFTER ADDRESSING THE MONTHLY LIVING EXPENSES, ON A SCALE OF 1 - 10, HOW DO YOU FEEL ABOUT THE OVERALL POTENTIAL OF YOUR PROPOSED VENTURE: _____

(1 = NOT VERY GOOD, 10 = GREAT!)

_____ (1 = NOT VERY GOOD, 10 = GREAT!)

Revenue and Expense Estimates⁴

Answer these questions with realistic, conservative estimates. Use the best information available and remember that you should change your estimates as you get actual price quotes, negotiate contracts and gain experience.

1. Estimate the number of units you will sell in the first year. _____
2. What is the average sales price per unit? \$ _____
3. Estimate your sales in dollars for the first year. \$ _____
4. Estimate your cost of merchandise or materials as a ratio or proportion of sales (for example, cost of materials (\$50) / total sales (\$100) = 0.5) \$ _____
5. Estimate the cost of the inventory needed to start the business. \$ _____
6. Enter the level of monthly personal expenses to be covered by the business. \$ _____
7. Estimate the monthly rent or mortgage payment for your business \$ _____
8. Estimate the rent deposit or mortgage down payment required. \$ _____
9. Estimate the total cost of the furniture and fixtures you will need to buy. \$ _____
10. What is the average useful life (in months) of these furnishings and fixtures? _____
11. Estimate the cost of the tools and equipment you will need to purchase. \$ _____
12. What is the average useful life (in months) of these tools and equipment? _____
13. Estimate the total level of monthly wages you will pay to your employees. \$ _____

Assessing Feasibility**Preliminary Worksheet #10****BALANCE SHEET**

A balance sheet is a financial statement that shows what is owned and what is owed by the business at a particular point in time. It consists primarily of two sections; assets and liabilities. The liabilities section of a balance sheet also contains an assessment of net worth. A balance sheet is constructed on the basis that the two sections must balance. The two sections form the equation:

$$\text{ASSETS} = \text{LIABILITIES} + \text{NET WORTH}$$

In other words, what is put into the business plus what is borrowed must equal the total value of assets. The distinction between liabilities and net worth is made in order to show the proportion of assets that are backed by debt and the proportion represented by contributions.

The balance sheet shows the condition of the business at one point in time. A balance sheet is rarely the same for any two points in time because the items on the balance sheet are constantly changing. For instances, inventories and assets are continually changing as are debts. The growth and success of a business can be evaluated by comparing two balance sheets at different points in time. Because the values listed in a balance sheet are representative of a particular point in time, one of the most critical aspects of a balance sheet is the date.

In preparing a balance sheet, assets are traditionally presented first. The assets are often listed in order of liquidity under the sub-headings current assets, intermediate assets and long-term assets. Current assets are those assets available as cash or easily converted to cash during the coming 12 months. Intermediate assets are those with a useful life of one to ten years. Long-term assets are those with an expected life in excess of ten years. The sum of the current, intermediate and long-term assets is presented as total assets.

Liabilities are also listed in order of their currency. Current liabilities are those debts that are due to be paid within the next 12 months such as accounts payable, notes payable and interest payable on all debts. Intermediate liabilities are the outstanding balances of debts against intermediate assets while long-term liabilities are the outstanding balances of debts against long-term assets. The sum of current, intermediate and long-term liabilities is presented as total liabilities.

The owners financial contribution to the business is represented by the difference in the value of total assets and total liabilities. The owners interest is labeled net worth (or owners equity) and totaled with the total liabilities. The sum of total liabilities and net worth must always be the same as the value of total assets.

AFTER ADDRESSING THE BALANCE SHEET ISSUES, ON A SCALE OF 1 - 10, HOW DO YOU FEEL ABOUT THE OVERALL POTENTIAL OF YOUR PROPOSED VENTURE: _____

(1 = NOT VERY GOOD, 10 = GREAT!)

Rob Holland
Assistant Extension Specialist
Agricultural Development Center

One of the most common tools used in evaluating the economic feasibility of a new enterprise or product is the break-even analysis. The break-even point is the point at which revenue is exactly equal to costs. At this point, no profit is made and no losses are incurred. The break-even point can be expressed in terms of unit sales or dollar sales. That is, the break-even units indicate the level of sales that are required to cover costs. Sales above that number result in profit and sales below that number result in a loss. The break-even sales indicates the dollars of gross sales required to break-even.

It is important to realize that a company will not necessarily produce a product just because it is expected to break-even. Many times, a certain level of profitability or return on investment is desired. If this objective cannot be reached, which may mean selling a substantial number of units above break-even, the product may not be produced. However, the break-even is an excellent tool to help quantify the level of production needed for a new business or a new product.

Break-even analysis is based on two types of costs: fixed costs and variable costs. Fixed costs are overhead-type expenses that are constant and do not change as the level of output changes. Variable expenses are not constant and do change with the level of output. Because of this, variable expenses are often stated on a per unit basis.

Once the break-even point is met, assuming no change in selling price, fixed and variable cost, a profit in the amount of the difference in the selling price and the variable costs will be recognized. One important aspect of break-even analysis is that it is normally not this simple. In many instances, the selling price, fixed costs or variable costs will not remain constant resulting in a change in the break-even.. And these changes will change the break-even. So, a break-even cannot be calculated only once. It should be calculated on a regular basis to reflect changes in costs and prices and in order to maintain profitability or make adjustments in the product line.⁷

There are three basic pieces of information needed to evaluate a break-even point:

Average Per Unit Sales Price: _____

Average Per Unit Variable Cost: _____

Average Annual Fixed Costs: _____

Billy G. Hicks, Dean

⁷ Management, Richard Hodgetts & Donald Kuratko, Second Edition, 1986.

The basic equation for determining the break-even units is:

$$\frac{\text{Average Annual Fixed Cost}}{(\text{Average Per Unit Sales Price} - \text{Average Per Unit Variable Cost})}$$

The basic equation for determining the break-even sales:

$$\frac{\text{Annual Fixed Cost}}{1 - (\text{Average Per Unit Variable Cost} \div \text{Average Per Unit Sales Price})}$$

Break-even analysis can be very helpful in the evaluation of a new venture. In most instances, success takes time. Many new enterprises and products actually operate at a loss (at a point below break-even) in the early stages of development. Knowing the price or volume necessary to break-even is critical to evaluating the time-frame in which losses are permissible. The break-even is also an excellent benchmark by which a company's short-term goals can be measured/tracked. Break-even analysis mandates that costs be analyzed. It also keeps a focus on the connection between production and marketing.

Example: A local livestock producer utilizes compost waste to develop an organic fertilizer product. The fertilizer is prepared for retail sale in 50 pound bags. The retail sales price is \$5.00 per bag. The average variable cost per bag is \$2.80 and average annual fixed costs are \$60,000. These three pieces of information are:

$$\begin{aligned}\text{Average Per Unit Sales Price} &= \$5.00 \text{ per bag} \\ \text{Average Per Unit Variable Cost} &= \$2.80 \text{ per bag} \\ \text{Average Annual Fixed Costs} &= \$60,000.00\end{aligned}$$

The above assumption can be utilized to calculate the number of bags that must be sold in order to break-even as well as the total dollar of sales needed to break-even. Using the formulas explained earlier, the following calculations can be made:

$$\text{Break-Even Units: } \$60,000.00 \div (\$5.00 - \$2.80) = \underline{\underline{27,273 \text{ bags}}}$$

$$\text{Break-Even Sales: } \$60,000.00 \div 1 - (\$2.80 \div \$5.00) = \underline{\underline{\$136,365}}$$

Therefore, no profits are made from the sale of this product until more than 27,273 bags are sold or more than \$136,365 in gross sales is generated.

Assessing Feasibility
